I tried out the new version on my Windows 7 machine and while I did like a few things about it and found it was less buggy than previous versions, it was not a hit. The banding that I had in my previous version was gone so I tried exporting jpegs instead of working with the raw file. I exported a jpeg series and stacked them, then loaded them one on top of the other to see if the banding came back. It did. It was obvious that the film grain setting was down, not jpeg. The previous program was better than this one. Lucid PS may be able to reproduce the older version. I am giving this one a C-. Before I started the review, I just wanted to say that my previous review of the new version 5.2 of Lightroom was a real eye opener for me. I even asked all the questions I would have liked to before buying it, and I am still using it. That review was well done, and so is this one. Lightroom 5 is, in spite of the many quick fixes, still a big step forward for photographers who want to create a workflow that takes advantage of the digital age, From color corrections to histograms and to accurate exposure, gradients, curves, masks, collections, those who still own the older versions of Lightroom (3-5) should jump at the chance to get 5, even if they just want the Elements for editing. I'm writing a review of Lightroom 5. The updated Lightroom supports more cameras than ever while being able to handle more raw formats than ever before. I'm excited to see what this version will continue to do and how it will address the needs of the photographer who needs to deal with all her files in one place.
