Installing Adobe Illustrator isn't as easy as installing Adobe Photoshop. First, you'll need to download and install the Adobe Illustrator software on your computer. Then, you need to locate the installation.exe file and run it. Once the installation is complete, you need to locate the patch file and copy it to your computer. After this, you need to run the patch file and then follow the instructions on the screen. After the patching process is complete, you can start using Adobe Illustrator.

The overall look and feel of A-a3 Tech 's Photoshop on iPad Pro is great. Photoshop Elements is a more direct version of the same program. Elements takes advantage of its tiny into, and scoringly support the iPad Pro. With such little screen real estate, it's a fair expectation that many features go unmentioned or unnoticed until you need them. But the basic strokes and operation feel the same as the desktop version, and it's perfect. From the shortcuts and keyboard shortcuts to the fine tooltips, the iPad Pro's touch screen is programmable. The software opens quickly, and the overall menu structure is easy to navigate. In fact, you're practically forced to use the iPad Pro for this the way one might put aside a real computer in favor of a tablet. The app's text is of a nature that it's a pain to edit. You can move type, resize it, wrap, and even skew it, but changing its color requires going to the Appearance palette, which is your typical tab-based "Window" system. There, you're asked to choose the color palette for all edited elements, which is the process best handled from scratch on the desktop. I can't see this ever being "good enough". Elements can help alleviate this process by suggesting the color for you, but honestly, the loss of one of my favorite features - the Color Picker - is too much for me to stomach. The number of palettes are quickly getting old and they get in each other's way. After opening the Appearance palette, you can't go back directly to the Channels/Saturation palette, as is your typical behavior in Windows-based apps. The Channels palette is quite similar to Elements' Channels palette, so it's not a deal-breaker for some. I would find it far more efficient to be able to go directly to Channels. Then, the Layer palette is another pain - imagine opening a regular Photoshop tab in a Windows-based app and having it open of its own accord. If you don't have the Layer palette open already, then it'll open, which is fine. But you won't have any way to place it within the regular UI unless you enlarge the Photoshop tab and drag it to

the place in the Graphic Styles where you need it.
